DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 8-9, 15, 25, 32-33, 39, 46-47 are rejected under 35 U.S.C. 102(b) as being anticipated by Alriksson et al. (US 2001/0024443), hereinafter Alriksson.

Regarding claims 1, 25, and 39, Alriksson discloses a method in an access router, the method comprising:

supplying to a first mobile router a delegated address prefix , based on attachment by the first mobile router to one of the access router and a second mobile router attached to the access router, each mobile router in a local mobile network serviced by the access router receiving a corresponding unique delegated address prefix for use within the local mobile network (each mobile in the ad hoc network is assigned static home address, this home address allows the mobile node to always be capable of receiving data in the same way as it receives data in it home network, see paragraph 28); and

registering a remote care-of address having the delegated address prefix with a prescribed home agent of the first mobile router, to register a reachability of the first mobile router (to be capable of receiving datagrams while visiting a foreign network the

Art Unit: 2661

mobile node has to register its current care-of-address with its home agent, see paragraphs 29-30).

Regarding claims 8, 32, 46, Alrksson discloses outputting a router advertisement message specifying an available network prefix for use within the local mobile network, and wherein: the second mobile router is assigned a second delegated address prefix distinct from the delegated address prefix and within an address space of the available network prefix, the local care-of address within the address space of the second delegated address prefix (each mobile node in the ad-hoc network having an assigned home address, see paragraph 30).

Regarding claims 9, 33, 47, Alrksson discloses registering step includes forwarding a binding update message from the first mobile router to the prescribed home agent, the binding update message specifying at least one of the first mobile router and a native mobile network prefix assigned to the first mobile router by the home agent is reachable via the remote care-of address (see paragraph 30).

Regarding claim 15, Alriksson disclose an access router (gateway, see figure 4) configured for providing connectivity to a wide area packet switched network (Internet, see figure 1) for a local mobile network (the wireless ad-hoc network) , the access router including:

Art Unit: 2661

a delegation resource configured for supplying to each mobile router a corresponding delegated address prefix, each of the delegated address prefixes within an available network prefix for use within the local mobile network (each mobile node in a assigned a static home address, this allows the mobile node to receive data, see paragraph 28);

and a routing resource including a routing table configured for storing, for each delegated address prefix, a corresponding local care-of address for reaching the corresponding mobile router in the local mobile network (see paragraph 30).

Allowable Subject Matter

Claims 2-7, 10, 16-20, 26-31, 34, 40-45, 48 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 11-14, 21-24, 35-38, 49-52 are allowed.
